

Squelch

June 21, 2021

**Official Publication of the Anaheim Amateur Radio Association
An ARRL Affiliated Club**

This Months Program (Info.)

“This is part two of a series on your first HF station.” This month we cover where are you going to put your antenna.

Where are you going to put your antenna? This can be a difficult problem if you don't have much room to work with outside. Also, you don't want to upset your neighbors so you need to take ascetics, CC&Rs and/or the city building code into consideration. If you have power lines on or near your property, make sure that there is no way the antenna will ever come in contact with them. That includes if the wind blows the antenna down or if an accident causes the antenna to fall. Remember:

High voltage in not good for you, your radios or the people you live with!!

Next Months Upcoming AARA Events

All events cancelled until further notice.

June. 5: TBD
